THE PROBLEM

You click “Claim”. Days later, your wallet is empty.

> “I only clicked ‘claim’ on an airdrop. I never sent anything. How is my wallet empty?”
>
> The typical complaint of a drained user

That click was a hidden **permission**: it let a stranger spend your tokens.

It has **no limit**, **never expires**, and your wallet **never shows it**.

> Real case, Oct 2026: a Maryland victim’s 9,067 USDT vanished about 33 minutes after deposit, via a fake NFT site’s wallet permission.

EVIDENCE

Reports and news agree: this happens at scale

REPORT · Scam Sniffer, 2024

Wallet drainers stole **$494M** from **332,000** wallets, up 67% from 2023.

REPORT · Scam Sniffer, 2024

56.7% of large losses came from one signed “Permit” approval.

NEWS · Yahoo News, Oct 2026

US charges six over fake NFT sites whose wallet permissions drained **~$517K** from 74 wallets.

NEWS · The Block, Aug 2024

One holder lost **$55M** in DAI after signing a single phishing transaction.

THE COST

What one click costs

$494M

stolen in one year (2024)

~$1,490

lost per victim, on average

$0

usually recovered: no bank, no chargeback

And beyond money: **trust**. A first-time user who gets drained rarely comes back, and every new chain like Portaldot depends on new users.

Sources: Scam Sniffer 2024 Web3 Phishing Report. Average = $494M ÷ 332,000 wallets.

THE SOLUTION

PortalGuard: a permission manager for your crypto

Like your phone asks before an app uses your camera, PortalGuard warns you before a site can spend your money, limits what it can take, and lets you switch it off.

1 · BEFORE YOU SIGN

PortalGuard Shield

A browser extension that pauses risky requests and explains them in plain words, before your wallet even opens.

Why: most victims can't read the wallet popup.

2 · KEY FEATURE · SAFEAPPROVE

A limit and an expiry date, not a blank cheque

Why: a warning can be ignored. A limit protects you even when you are fooled: the scammer gets at most the limit, and nothing after it expires.

3 · AFTERWARDS

Scanner + one-click revoke

See every permission you gave, ranked by risk, and cancel any of them with one click.

Plus: a shared blocklist of known drainers that all three check.

BEFORE AND AFTER

Same click, very different outcome

	Before PortalGuard	With PortalGuard
A scam site asks	A wallet popup you can't read	A plain-language warning first
Giving permission	Unlimited, a blank cheque	A limit you choose
How long it lasts	Forever	Expires, e.g. after 1 hour
Seeing permissions	Invisible without technical tools	One page, ranked by risk
Cancelling one	Manual, technical, slow	One click
Known scammer	No warning	Flagged and blocked
If you are fooled	Lose 1,000 of 1,000 tokens	Lose at most 10 (the limit)

What it means for Portaldot

Users

A free safety check before and after every new app they try.

dApps

Ask for a SafeApprove grant instead of unlimited access, and earn users' trust.

Wallets

Read the public registry to warn users before they sign.

A safer chain keeps new users. Security is a public good every Portaldot app shares.

Approve less.
Lose nothing.
